DT01 Recurred/524338 2005

## In the Claims:

No claims have been amended herein. The claims and their status are shown below.

- 1. (Original) An isolated mammalian cell stably infected with an *Anaplasma* species selected from the group consisting of *A. marginale*, *A. centrale*, *A. bovis*, *A. ovis*, and *A. platys*, wherein said mammalian cell is a nucleated cell.
- 2. (Original) The mammalian cell of claim 1, wherein said cell is infected with A. marginale.
- 3. (Original) The mammalian cell of claim 1, wherein said cell is infected with A. centrale.
  - 4. (Original) The mammalian cell of claim 1, wherein said cell is infected with A. bovis.
  - 5. (Original) The mammalian cell of claim 1, wherein said cell is infected with A. ovis.
  - 6. (Original) The mammalian cell of claim 1, wherein said cell is infected with A. platys.
- 7. (Original) The isolated mammalian cell of claim 1, wherein said mammalian cell is an endothelial cell.
- 8. (Original) The isolated mammalian cell of claim 7, wherein said cell is selected from the group consisting of a bovine corneal endothelial cell, a rhesus monkey microvascular endothelial cell, a human umbilical vascular endothelial cell, and a human microvascular endothelial cell.
- 9. (Original) An isolated mammalian cell stably infected with an *Anaplasma* species selected from the group consisting of *A. marginale*, *A. phagocytophilum*, *A. centrale*, *A. bovis*, *A. ovis*, and *A. platys*, wherein said mammalian cell is an adherent cell.
- 10. (Original) The mammalian cell of claim 9, wherein said cell is infected with A. marginale.
- 11. (Original) The mammalian cell of claim 9, wherein said cell is infected with A. phagocytophilum.
- 12. (Original) The mammalian cell of claim 9, wherein said cell is infected with A. centrale.
  - 13. (Original) The mammalian cell of claim 9, wherein said cell is infected with A. bovis.
  - 14. (Original) The mammalian cell of claim 9, wherein said cell is infected with A. ovis.

Serial No.: To Be Assigned Filed: February 11, 2005

Page : 4 of 10

15. (Original) The mammalian cell of claim 9, wherein said cell is infected with A. platys.

- 16. (Original) The isolated mammalian cell of claim 9, wherein said mammalian cell is an endothelial cell.
- 17. (Original) The isolated mammalian cell of claim 5, wherein said cell is selected from the group consisting of a bovine corneal endothelial cell, a rhesus monkey microvascular endothelial cell, a human umbilical vascular endothelial cell, and a human microvascular endothelial cell.
- 18. (Original) An isolated mammalian cell stably infected with *Anaplasma marginale*, wherein said mammalian cell is a nucleated cell.
- 19. (Original) An isolated mammalian cell stably infected with *Anaplasma* phagocytophilum, wherein said mammalian cell is an adherent cell.
- 20. (Original) A method of making a mammalian cell that is stably infected with an *Anaplasma* species selected from the group consisting of A. *marginale*, A. centrale, A. bovis, A. ovis, and A. platys, said method comprising contacting a nucleated mammalian cell with said *Anaplasma* species to produce a mammalian cell stably infected with said *Anaplasma* species.
  - 21. (Original) The method of claim 20, wherein said cell is infected with A. marginale.
- 22. (Original) A method of making a mammalian cell that is stably infected with an *Anaplasma* species selected from the group consisting of *A. marginale, A. phagocytophilum, A. centrale, A. bovis, A. ovis,* and *A. platys,* said method comprising contacting a mammalian adherent cell with said *Anaplasma* species to produce a mammalian cell stably infected with said *Anaplasma* species.
- 23. (Original) The method of claim 22, wherein said cell is infected with A. phagocytophilum.
- 24. (Original) A method of making a mammalian cell that is stably infected with *Anaplasma marginale*, said method comprising contacting a nucleated mammalian cell with said *A. marginale* to produce a mammalian cell stably infected with said *A. marginale*.
- 25. (Original) A method of making a mammalian cell that is stably infected with *Anaplasma phagocytophilum*, said method comprising contacting a mammalian adherent cell

Serial No.: To Be Assigned Filed: February 11, 2005

with said A. phagocytophilum to produce a mammalian cell stably infected with said A. phagocytophilum.

- 26. (Original) A method for propagating an *Anaplasma* species selected from the group consisting of *A. marginale, A. centrale, A. bovis, A. ovis,* and *A. platys*, said method comprising contacting a nucleated mammalian cell with said *Anaplasma* species to produce a mammalian cell stably infected with said *Anaplasma* species, and culturing said stably infected mammalian cell.
  - 27. (Original) The method of claim 26, wherein said cell is contacted with A. marginale.
- 28. (Original) The method of claim 27, wherein said A. marginale is obtained from tick cells or red blood cells.
- 29. (Original) The method of claim 26, wherein said mammalian cell is an endothelial cell or a Vero cell.
- 30. (Original) The method of claim 29, wherein said mammalian cell is selected from the group consisting of a bovine corneal endothelial cell, a rhesus monkey microvascular endothelial cell, a human umbilical vascular endothelial cell, and a human microvascular endothelial cell.
- 31. (Original) The method of claim 26, wherein said *Anaplasma* species is propagated for at least 8 weeks.
- 32. (Original) A method for propagating an *Anaplasma* species selected from the group consisting of *A. marginale*, *A. phagocytophilum*, *A. centrale*, *A. bovis*, *A. ovis*, and *A. platys*, said method comprising contacting a mammalian adherent cell with said *Anaplasma* species to produce a mammalian cell stably infected with said *Anaplasma* species, and culturing said stably infected mammalian cell.
- 33. (Original) The method of claim 32, wherein said cell is contacted with A. phagocytophilum.
- 34. (Original) The method of claim 33, wherein said *A. phagocytophilum* is obtained from HL-60 cells or white blood cells.
- 35. (Original) The method of claim 32, wherein said mammalian cell is an endothelial cell or a Vero cell.

Serial No.: To Be Assigned Filed: February 11, 2005

36. (Original) The method of claim 35, wherein said mammalian cell is selected from the group consisting of a bovine corneal endothelial cell, a rhesus monkey microvascular endothelial cell, a human umbilical vascular endothelial cell, and a human microvascular endothelial cell.

- 37. (Original) The method of claim 32, wherein said *Anaplasma* species is propagated for at least 8 weeks.
- 38. (Original) A method for propagating *Anaplasma marginale*, said method comprising contacting a nucleated mammalian cell with said *A marginale* to produce a mammalian cell stably infected with said *A. marginale*, and culturing said stably infected mammalian cell.
- 39. (Original) A method for propagating *Anaplasma phagocytophilum*, said method comprising contacting a mammalian adherent cell with said *A. phagocytophilum* to produce a mammalian cell stably infected with said *A. phagocytomphilum*, and culturing said stably infected mammalian cell.
- 40. (Original) A method for obtaining an *Anaplasma* species selected from the group consisting of *A. marginale*, *A. centrale*, *A. bovis*, *A. ovis*, and *A. platys*, said method comprising culturing a nucleated mammalian cell stably infected with said *Anaplasma* species, and isolating said *Anaplasma* species from said mammalian cell.
  - 41. (Original) The method of claim 40, wherein said cell is infected with A. marginale.
- 42. (Original) The method of claim 40, wherein said *Anaplasma* species is an attenuated *Anaplasma* species.
- 43. (Original) A method for obtaining an *Anaplasma* species selected from the group consisting of *A. marginale*, *A. phagocytophilum*, *A. centrale*, *A. bovis*, *A. ovis*, and *A. platys*, said method comprising culturing a mammalian adherent cell stably infected with said *Anaplasma* species, and isolating said *Anaplasma* species from said mammalian cell.
- 44. (Original) The method of claim 43, wherein said cell is infected with A. phagocytophilum.
- 45. (Original) The method of claim 43, wherein said *Anaplasma* species is an attenuated *Anaplasma* species.
- 46. (Original) A method for obtaining *Anaplasma marginale*, said method comprising culturing a nucleated mammalian cell stably infected with said *A. marginale*, and isolating said *A. marginale* from said mammalian cell.

Serial No.: To Be Assigned Filed: February 11, 2005
